CIP Kenya (PQS) Germplasm Distribution during SASHA 1

■ SPK 004/6

To do:

- Identity verification of germplasm to be distributed
 - DNA fingerprinting underway for 104 genotypes
 - Routine morphological characterization and documentation need to be routine
- System for documentation still requires much improvement
 - Should be able to draw on and integrate with the Lima database, but hasn't yet happened
- Welcome involvement of CIP gene bank to develop a strategy for conservation of African landrace germplasm
