

Table 1: Sample of Learning journeys and ideas learned and being tried

Context of learning journey	Idea or skill picked & being tried/tested in practice
<i>Learning journey: Kigali 2015, Route 1: Net tunnels</i>	I have been able to modify and design mobile net tunnels to appropriate size in my country context
	Trying to promote net tunnel & marketing strategies with farmers in SUSTAIN project in Western Kenya- Have identified farmers willing to partner in production of clean planting materials at the net tunnel level.
<i>Learning Journey: Kigali 2015, Route 2: Inspection of sweetpotato Quality Declared Seed:</i> <i>Also from Online Discussions</i>	Learnt how to differentiate the kind of planting materials we gave to multipliers; Standards & requirements for certification are being developed;
	Now, I know I should not do more than 2 ratoons on pre-basic, basic and certified seed production, and only one ratoon for QDS. We are trying to respect these so as to improve the quality of planting materials.
<i>Learning Journey: Kigali 2015, Route 3: Rubona Research Station: tissue culture micro propagation and hardening</i>	Screen house management of planting material production; Defining seed classes and involvement of the seed inspectors in the sweetpotato seed inspection
	Have conducted rapid seed increase for all pre-basic and basic seed; Have developed the seed inspection standards for Uganda that is being piloted
<i>Learning Journey: Arusha 2016, Route 1: Good agronomic practices for commercial root production</i>	Saw growing interest in Sweetpotato production and I went & organized stakeholders meeting, they had opportunity to see screenhouses with clean plant materials of different varieties
<i>Learning Journey: Arusha 2016, Route 2: Business case for root production</i>	Learnt use of Private-Public Partnerships & used it in project where we contracted a private lab to mass multiply, wean and semi-harden SP plantlets.
	Starting experimentation of planting densities for vine production for seed.
	Motivating private investor (JARA) to contract farmers for root production-be the supplier of clean seed & buy roots to process and take to markets. But not started action
